EXPERIENCE

Lead Backend Engineer — ADCB (Abu Dhabi Commercial Bank), Abu Dhabi Nov 2025 – Present

- Cut MTTR by ~60% across 10 banking services and 20K+ daily events by designing and building a multi-agent AI Operations Copilot (LangGraph, Azure OpenAI, RAG over 2M+ documents) with auditable MCP tool access, Validator gating and precision/recall evaluation.
- Delivered fault-tolerant processing for 100K+ card and payment transactions, measured by guaranteed delivery and idempotent handling of retries, by designing a Kafka- and SQS-driven architecture with idempotent consumers in Java 17/21, Kotlin and Spring Boot.
- Kept payment flows stable during downstream slowdowns by applying back-pressure and Resilience4j circuit breakers, rejecting consumer scale-out and aggressive retries that would have amplified load on failing dependencies.
- Resolved deadlocks on concurrent wallet balance updates by shortening transactions and enforcing consistent lock ordering on PostgreSQL/Oracle.
- Reduced GC-driven latency spikes on Java services by tuning the collector and GC settings, optimising thread pools, removing orphaned objects and moving Spring beans from prototype to singleton scope.
- Reduced incident troubleshooting time by ~40% across 100K+ daily events by building Python/FastAPI telemetry analytics and Kafka automation.
- Lead a team of 6 engineers, owning architecture through technical specifications, estimation and design and code reviews.

Senior Software Engineer, Observability Platform — SolarWinds (Remote) Jul 2023 – Nov 2025

- Delivered sub-second query latency on high-throughput workloads by building Go stream processors and Java ETL workers ingesting Kafka events into ClickHouse, with Project Reactor buffering, indexing and query tuning.
- Enabled near-real-time incident detection with a 1-second alerting cadence into ServiceNow and PagerDuty by building Spark Structured Streaming anomaly detection on GCP.
- Controlled LLM cost and reliability in an AI-assisted observability pipeline by adding provider failover, circuit breakers and token budgeting.
- Built low-latency Go services on DynamoDB with optimistic concurrency, secured partner APIs with OAuth2, mTLS and HMAC, and mentored 4 engineers.

Backend Engineer, Platform Integrations — Publicis Sapient (Fintech) Jul 2021 – Jul 2023

- Modernised business-critical legacy banking integrations by refactoring tightly coupled components into Spring Boot, Django and Go services over REST and MQ, resolving duplicate payment processing with idempotency patterns.
- Improved latency and release safety by adding Redis caching, sliding-window rate limiting, and blue/green and canary deployments via ArgoCD.

Software Engineer, Distributed Telemetry Pipeline — Wipro Limited Aug 2019 – Jul 2021

- Sustained 4x traffic growth at 99.95% availability by engineering a Go, Kafka, Redis and Kubernetes ingestion pipeline with idempotent, checkpointed processors, dead-letter queues and consumer-lag-based autoscaling.

SKILLS

Languages: Java 17/21, Go, Python, Kotlin, TypeScript, SQL

Backend & Distributed Systems: Spring Boot, FastAPI, Django, Kafka, RabbitMQ, SQS/SNS, gRPC, REST, Microservices, Idempotency, Back-Pressure, Circuit Breakers, JVM GC Tuning

Data: PostgreSQL, Oracle, MySQL, Redis, DynamoDB, MongoDB, ClickHouse, BigQuery, Spark, Flink

Cloud & DevOps: Kubernetes, Docker, Terraform, ArgoCD, GitHub Actions, Jenkins, Azure, AWS, GCP, OpenStack, OpenTelemetry, Prometheus

AI: LangGraph, LangChain, MCP, RAG, Pinecone, Azure OpenAI, LLM Evaluation, Guardrails

EDUCATION & ACHIEVEMENTS

B.Tech, Mechanical Engineering — Galgotias University 2019

Certifications: Oracle Solution Architect Professional · Oracle Certified Professional, Java · Confluent Kafka Fundamentals · Distributed Systems & Cloud Computing Specialization (Coursera)

Achievements: 2nd place regionally, ICPAC · 3rd place, HOWATHON 2022 · 1000+ LeetCode/GFG problems solved
